Project Description Sheet

Project Type: Roads/Sidewalks Water Sanitary Storm Recreation/Parks Flood Other

Water Quality Assurance Initiative Project - Phase 2

Project Title:

See page 2 of document.

Project Limits:

8/2023

Anticipated Start Date:

Grants (if awarded):

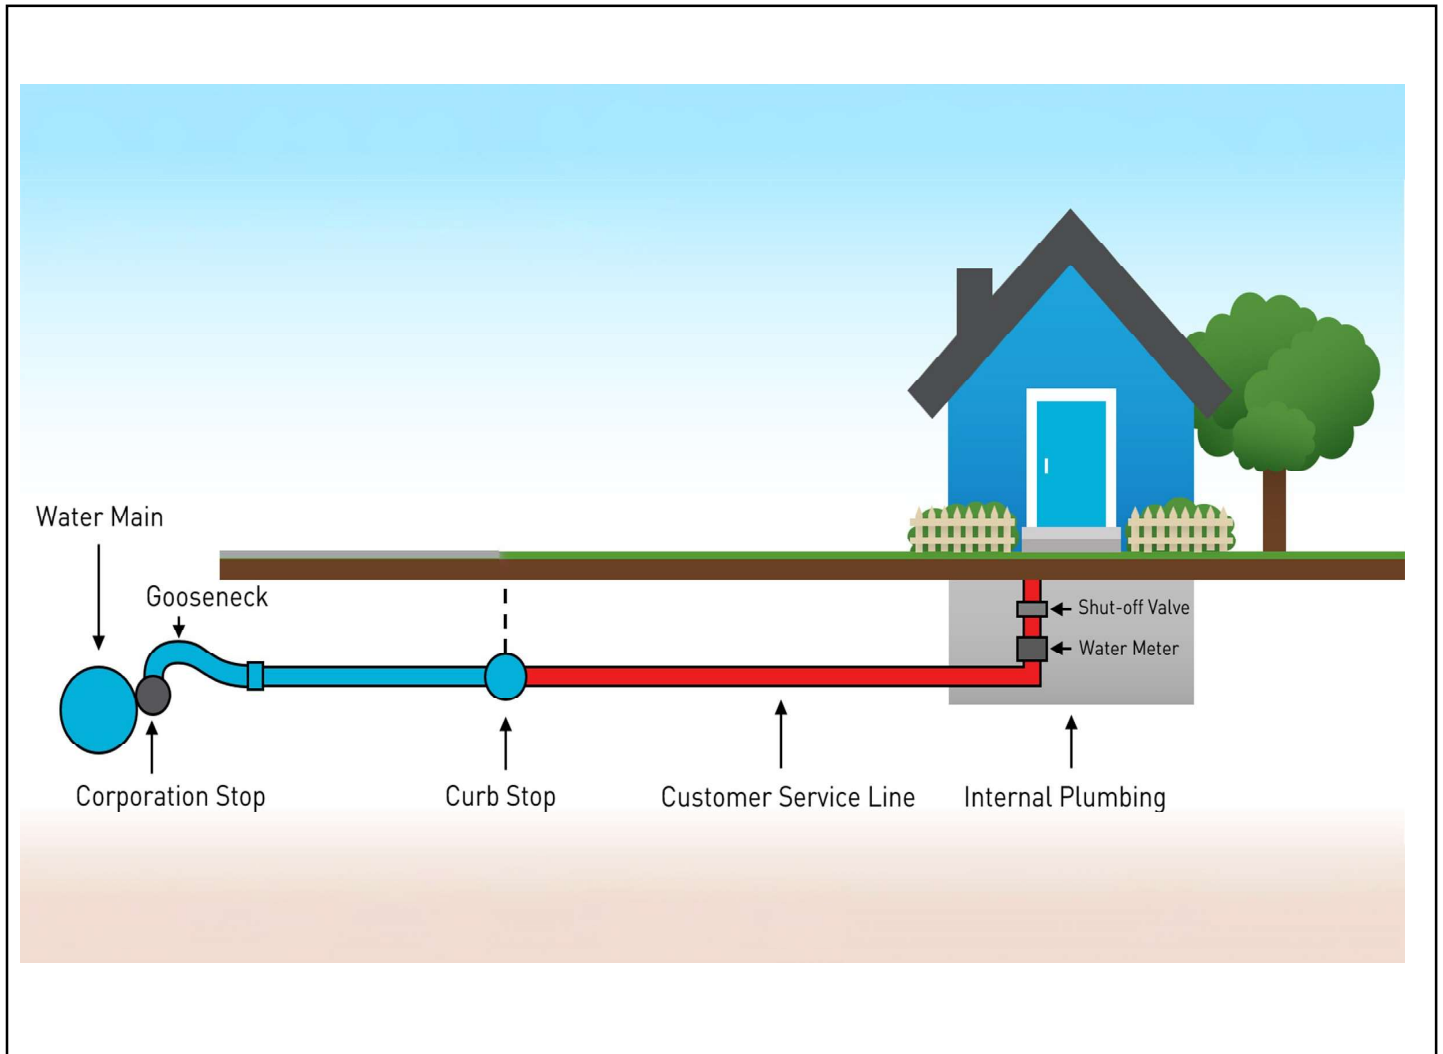

Conquest Construction

Contractor:

Description:

The City of Rahway is looking to test pit all remaining unknown water service lines within the City as part of this project. Currently, based on Veolia inventory, that is approximately 5,200 services. It is City wide and would eliminate any remaining lead service unknowns. In addition, ENGenuity will generate a list of approximately 90 lead services that will be replaced as part of this project as well. This will allow the City to maintain a reasonable level of lead service replacement in accordance with the current 10% State guidelines.

RE: Curb Stop Test Pit Project

This project only impacts those properties that received a notification from the City in February of 2022 indicating their property was identified as **potentially** having a *lead service line or lead or galvanized components* (LSL's) within their water service line that is situated between the City's water main and the meter on their property.

The project is limited to test pit excavation around the curb stop for the water service by the City's contractor, ValveTek, Inc. The purpose of the test pit is to determine the material composition of the service line on both sides of the curb stop in accordance with New Jersey Lead Service Line Replacement Laws.

The curb stop is most often located in the City's Right-of-Way between the curb and sidewalk. However, on occasion, the curb stop may be located within sidewalks, paved areas, behind the sidewalk, within landscaped areas or other areas. Regardless of the location, immediately following the test pitting, the area will be temporarily backfilled to remove any immediate hazards. The contractor will return to address final restoration prior to completion of the project. Final restoration is not performed immediately following the test pit activity so that restoration efforts can be combined in order to allow the main priority of the test pitting work to proceed as quickly as possible. We appreciate your patience during this time.

After the material composition is determined, the information will be recorded and added to the City's database to be in accordance with New Jersey Lead Service Line Replacement laws. If any lead or galvanized materials are discovered, the water service will be scheduled for future replacement.

To view the documented material of your water service please check the following link:
https://www.cityofrahway.org/DocumentCenter/View/1176/Rahway_LSL_Inventory_7_22_2022_Final-for-Web?bidid=

As a reminder, the City of Rahway's water mains and treatment plant do not contain any lead components. The focus of this program is the identification and eventual replacement of lead service lines from the main to the meter.

In the meantime, should you have any questions regarding this specific project, please contact Engenuity Infrastructure, the City's consultant engineer samos@engenuitynj.com or 732-741-3176. For general questions about your water service, please contact Veolia Customer Service at csnj@veolia.com or 877-303-2435.
